

Blinkit Category-Exploration — Findings Report

Generated 2026-07-22T08:35 · 632 relevant of 2282 tagged (27.7%)

Candidate barriers/drivers with evidence strength — HYPOTHESES, not conclusions. To be screened by survey and refined by interviews.

2303 Reviews collected	2282 AI-tagged	632 · 27.7% Relevant
143 Stuck in routine	111 Want→explore, blocked	98 Explored new category

Executive summary

- In-app discovery friction is the single largest barrier, accounting for 26.3% of relevant feedback where users fail to navigate beyond routine items.
- Price uncertainty and perceived premium markups vs offline alternatives deter 21.7% of users from trying non-grocery categories like electronics and home essentials.
- Quality mistrust and strict return policies push users toward specialist stores for high-value electronics and fresh dairy items.
- Cross-selling and targeted trial promotions show high conversion potential but remain underutilized across the user journey.

Top barriers to category exploration

Exploration-signal mix & sentiment

Exploration signal

Sentiment (relevant)

Categories users mention

Where exploration signal shows up (by source)

Segments — locked-in vs. explorers

- **grocery_only_regular** — High purchase frequency for daily essentials, heavy reliance on reorder/routine flows, reluctant to browse non-food categories.
- **convenience_first** — Time-poor users driven by speed; defaults to known items during emergency or quick replenishment needs.
- **price_sensitive** — Compares unit pricing across platforms; hesitant to buy non-grocery goods due to fear of hidden handling fees or markups.
- **multi_category_explorer** — High digital literacy, willing to test quick commerce for electronics and home accessories when speed is paramount.
- **convenience_first** — Explores non-grocery options selectively during high-urgency or late-night emergency situations.

Category-specific growth opportunities

Electronics — barrier: High perceived risk of receiving defective or tampered goods alongside non-existent return accountability. → opportunity: Introduce verified brand authenticity badges and clear return/exchange guarantees at checkout.

Home — barrier: Exorbitant delivery fees on heavy/bulky utility items and low initial category awareness. → opportunity: Offer tiered bulk delivery discounts and introduce seasonal utility bundles.

Beauty — barrier: Difficulty discovering budget-friendly or specific niche skincare items through standard app search. → opportunity: Curate dedicated beauty discovery hubs with price filters like 'Gifts Under \$500'.

Pet — barrier: Low awareness of specialized pet food assortment during non-emergency browsing. → opportunity: Cross-sell pet food samples to frequent grocery buyers and introduce emergency pet supply badges.

Recommended experiments (to validate)

Contextual Cross-Category Nudges at Checkout (targets `hard_to_discover_in_app`): If we display personalized non-grocery add-on recommendations (e.g., beauty or stationery) based on basket context at checkout, then cross-category trial rates will increase by 15%.

Local Price-Match Transparency Badging (targets `price_uncertainty_new_category`): If we display price-confidence badges showing price parity with local markets on personal care and home goods, then trial conversion among price-sensitive users will rise by 20%.

Hassle-Free Category Return Guarantees (targets `dont_trust_quality_for_new_category`): If we offer clear 48-hour replacement guarantees on non-grocery electronics and personal care, then first-time category exploration will increase by 25%.

Top jobs-to-be-done

- Get daily groceries and fresh essentials quickly and reliably (~245)
- Order electronics and gadgets with instant delivery and easy returns (~64)
- Replenish daily snacks, beverages, and impulse items (~28)
- Purchase personal care, beauty, and grooming products discreetly (~29)
- Source emergency home, stationery, and utility supplies late at night (~20)

Top unmet needs

- Transparent and competitive pricing without excessive handling or delivery markups on non-grocery items
- Guaranteed freshness and strict cold-chain management for dairy and temperature-sensitive products
- Easier category navigation and intelligent search that surfaces non-exact or broader category queries
- Hassle-free replacement/return policies for high-value electronics, beauty, and general merchandise

Surprising / counter-intuitive

- Users frequently turn to quick commerce for niche emergency cross-category needs—such as late-night exam printouts or stray animal care—proving willingness to buy non-grocery items when urgency overrides habit.
- Convenience-first shoppers represent both the largest locked-in segment (30 users) and the largest explorer segment (22 users), indicating that urgency is the primary dynamic bridge between routine lock-in and multi-category trial.
- Perceived assortment gaps are often search UI failures rather than inventory issues, as users label items as 'missing' when exact keyword searches fail to surface relevant categories.

Hypotheses (with evidence strength)

H1. In-app discovery and search limitations cause users to remain unaware of non-grocery categories, reinforcing routine grocery reordering.

Confidence: high · 357 items across 4 sources (app_store, play_store, reddit, youtube) · ✓ triangulated

166 relevant user feedback items point to category discovery difficulty, while search friction limits users to reordering known items.

H2. Perceived price markups and fee uncertainty create high friction for users evaluating non-essential or high-value non-grocery categories.

Confidence: high · 329 items across 4 sources (app_store, play_store, reddit, youtube) · ✓ triangulated

Price uncertainty (93 mentions) combined with concerns over premium pricing vs offline alternatives (44 mentions) deters price-conscious segments from exploring beyond daily groceries.

H3. Lack of product trust and post-purchase return friction drive users to rely on specialist retailers for high-value or high-involvement products.

Confidence: high · 286 items across 4 sources (app_store, play_store, reddit, youtube) · ✓ triangulated

Concerns over damaged items, lack of accountability for defective electronics, and perceived quality risks in non-grocery sectors encourage users to default to established specialized stores.

Validation — insight quality
